To give an example, Red is ColorIndex 3. So any cell you made Red you actually made ColorIndex 3. And if you redefine ColorIndex 3 to be say, purple, then your cell will indeed be made purple, but all other red cells in the workbook will also be changed to purple. There are several strategies to deal with this.

Supposing that your start time is in A2 and end time in B2, you can use a simple equation B2-A2 to calculate the difference between two times, and then multiply it by 24, which is the number of hours in one day: =(B2-A2) * 24. To get the number of complete hours, use the INT function to round the result down to the nearest integer: =INT((B2-A2 ...

Good question! I don't know of any specific resource for the formulas you can use inside of the filter. They need to start with an "=" sign, and you create a formula for the first row of your data, and let the filter apply that test to all the other rows, e.g. if your data was in A2:D100 say, with index numbers in column 1, and you wanted just odd numbers to remain, you could use a ...
