Using algebra, we can verify that this shared point is actually  $\left(-3,-2\right)$  and not  $\left(-2.999,-1.999\right)$ . By substituting the x – and y-values of the ordered pair into the equation of each line, you can test whether the point is on both lines. If the substitution results in a true statement, then you ...

Chapter 34 Clustering. The algorithms we have described up to now are examples of a general approach referred to as supervised machine learning. The name comes from the fact that we use the outcomes in a training set to supervise the creation of our prediction algorithm. There is another subset of machine learning referred to as unsupervised. In this subset we do not necessarily know the ...

A prime number (or a prime) is a natural number greater than 1 that is not a product of two smaller natural numbers. A natural number greater than 1 that is not prime is called a composite number. For example, 5 is prime because the only ways of writing it as a product,  $1 \times 5$  or  $5 \times 1$ , involve 5 itself. However, 4 is composite because it is a product ( $2 \times 2$ ) in which both numbers are smaller ...
