**I had this book for a discrete math class about 10 years ago. I'm glad I held onto it. It's been great for a proofs class which uses a completely indecipherable text (A Transition to Advanced Mathematics). The text has answers for odd problems. The solution manual for the 4th Edition is still out there, I got a copy a month ago**

A path in a directed graph is a non-repeating sequence of arrows that have endpoints in common. For example, in Figure 1 there is a path from X to Z, which we can write as  $(X \rightarrow T \rightarrow Y \rightarrow Z)$ . A directed path is a path in which all the arrows point in the same direction; for example, there is a directed path  $(S \rightarrow T \rightarrow Y \rightarrow Z)$ .
